

DNA+ advanced forensic protection

Helping you reduce your theft risk and cut your theft excess by 50%

We now include with your DUAL insurance policy your very own DUAL DNA+ forensic coding system.

Forensic coding is a powerful deterrent to thieves and reduces the risk of theft, which is why we'll reduce your theft excess by 50% if you use it.

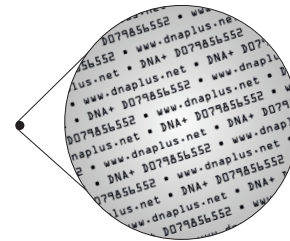

Each dispenser of DUAL DNA+ contains a fluid with thousands of microdots in it, each with a unique alpha-numeric code, which is already registered to your business. All you need to do is apply your forensic code according to the guide and display the warning signage to your property and assets.

Police can quickly and easily identify DUAL DNA+ with a UV light and read your code with a basic magnifier. With your unique code, police will obtain ownership verification from the dedicated police database, providing them with irrefutable evidence that helps to secure convictions.

In the unfortunate event of a theft claim, you will be required to provide evidence that you have installed DUAL DNA+ and displayed the signage at the location of the loss in order to benefit from the 50% theft excess reduction. This evidence should take the form of photographic and/or written record kept in a company log, and a company note of what plant the DUAL DNA+ has been applied to.

Deters

Forensic evidence is a powerful deterrent. It provides irrefutable evidence, securing convictions. Display the signage. Thieves prefer targets that reduce the chances of being caught.

Detects

DUAL DNA+ glows under ultraviolet light and is easily detected. A single microdot is enough to definitively link property to its rightful owner.

Protects

We aim to protect your business from theft and its consequences. By reducing your theft risk, we can offer you more competitive insurance rates.
